Project writeup

Project Name: validation of user login

In this project we are going to take the input from the webpage and validate whether the user given details are correct or incorrect

Development Environment

●   Eclipse IDE for Enterprise Java Developers v2019-03 (4.11.0)

●   Apache Tomcat Server v9.0

●   JRE: OpenJDK Runtime Environment 11.0.2

STEP1: Creating a dynamic web project

   Here we have developed the code in java servlet for the login details.

- Creating a LoginServlet servlet
- Creating a Dashboard servlet
- Creating a Logout servlet

STEP2: Creating the html page

- Index.html

  Mapping in between servlet and html code.

Develop the html code to take the input and verify and validation.

STEP3: for servlet-api.j

STEP4: Building the project

     Publishing and starting the project

     Running the project

STEP5:Pushing the code to your GitHub repositories
