Write Up

Here we write a program using JavaScript to decide the budget of a specific team. We develop a website where program managers of a specific team will add details of professional deals they want to have with vendors. The finance team will check expenses of those teams and will decide their annual budget.

The following are used:

● Visual Studio Code: An IDE to code for the application

● JavaScript: A programming language

● Git: To connect and push files from the local system to GitHub

● GitHub: To store the application code and track its versions

● JavaScript concepts: Functions, prototypes, primitives, objects, IIFEs, promises, async, and webpack

Following requirements are met:

● Versions of the code should be tracked on GitHub repositories

● Team Budget Planner should work properly
